BACKGROUND OF THE INVENTION

1. FIELD OF THE INVENTION

3/22/06
OK to Enter

The present invention relates to production method and mechanism for the production of bituminous hot mix (asphalt) in plants where aggregate and micro granulated dust particles obtained from ballast material are used as raw material and collected within a closed system. In this system, aggregate materials are crushed and separated through to screens considering the requirement for their relative particle sizes and grades and deposited. Later aggregates are either transferred into the asphalt plant for continuous feeding of the system or taken directly for discharge.
